

1 CLAIM 1

2 An improved band aid member having an upper surface and a lower
3 surface, such band aid having means to aid in the application and
4 retention of medication on an area of a person's skin comprising:

5 (a) a band aid member having an upper surface and a lower
6 surface, and member having an opening extending from
7 the upper surface to and through the lower surface,
8 said opening being adapted to receive medication for
9 the given area of the person's skin;

10 (b) adhesive means coated in the lower surface of the
11 band aid member.
